

The background of the slide is a photograph of an e-waste dump, showing a large pile of discarded electronic components and debris on dark, uneven ground. A prominent pink rectangular box is centered in the upper half, containing the title text. To the right of the title box, there is a technical line drawing of a hard drive, showing its internal components like the platters and actuator arm, with various parts labeled with letters and numbers. The drawing is overlaid on the photograph of the dump.

BEHIND THE SMART WORLD

22 hard drives from a west African e-waste dump - Behind the Smart World

Workshop Transmedia matters, Basel/Switzerland, Nov 3-4, 2016

Linda Kronman, Andreas Zingerle (KairUs Art collective)

KAIRUS Art + Research

Started 2010 by Linda Kronman and
Andreas Zingerle

Artistic works around the thematic of
trust, Internet fraud and vigilante
communities.

Re: Dakar Art Festival

A transmedia installation that documents the process of a new art scam form.

Motivation:

- Working with thematic Internet fraud
- Artist in residency in Ghana
- Articles about e-waste criminals illegal dumping of e-waste.

GHANA: Internet criminals cash in on e-waste dumping

Award winning journalist George Sydney Abugri

Ghana holds the unenviable record as the second most Internet fraud-prone country in Africa, after Nigeria, and the seventh most cybercrime-prone country in the world. The US State Department also lists Ghana as one of the top sources of cybercrime in the world. [Source: The Global Internet Report ranking]

Award winning Ghanaian journalist GEORGE SYDNEY ABUGRI has been exploring the link between internet crimes and e-waste dumping in Ghana. Kindly reproduced under permission, this is an extract from his paper.

13 Desktop hard drives (3.5")
9 Laptop hard drives (2.5")

4: Hitachi, Fujitsu, Western Digital
3: Maxtor, Seagate
1: Samsung, HP, Toshiba, IBM

Oldest production date: March '97
Newest production date: March '08

Ranging from 644MB to 160GB

Social engineering method:
'Dumpster Diving'

Wikipedia defines dumpster diving as: “the practice of sifting through commercial or residential trash to find items that have been discarded by their owners, but which may be useful to the dumpster diver”.

The main reason for dumpster diving is for the acquisition of information.

As students, Bill Gates and Microsoft co-founder Paul Allen went dumpster diving to try and get source code.

Once, they found a printout of the TOPS-10 (Timesharing OS) source code, and it unlocked a lot of secrets.

Practices of found footage and media archeology:

Artists gather source material from thrift stores, garage sales, flea-markets and dumpsters.

Methodologies

- Planned as a 'data-recovery' workshop
 - servus.at+fundings = research lab
- DIY recovery session using FLOSS tools
- Artlab with symposium by experts + 10 artists from various backgrounds

Out of 22 hard drives:

- 3 were immediately accessible with data on them.
- 2 were recovered by us with open source tools 'photorec' and 'testdisk'.
- 1 was (so far) recovered by technicians from Datenrettung ECS-Solutions

1.

Work with people you trust,
and are interested in the project as well.

2.

- Data set should have been sent out earlier
- data was raw = viruses

3.

- learning from the experts, excursion, discussions was good for the participants
- briefing: communicate expectations better

3.

- learning from the experts, excursion, discussions was good for the participants
- the experts made the artists very cautious
- briefing: communicate expectations better

4.

- Outcome of the artlab was not met completely and we shifted to broaden the topic and work with artists that did projects around “saving-deleting-resurfacing” of data.

BEHIND THE SMART WORLD ARTLAB – ARTISTIC STRATEGIES FOR DEALING WITH RESURFACING DATA

by KairUs - Linda Kronman and Andreas Zingerle

Breaches of Western information security thanks to a rise in electronic waste circulation have been particularly pronounced in Ghana, where a certain cadre of citizens has taken to searching out information on Westerners' old hard drives for extortion purposes.¹

Since 2010 we as KairUs artist duo have focused on researching topics such as spam, scam and Internet fraud. In August 2014 our research had evolved to the stage that we needed to take a field trip to West Africa, where a considerable number of so called advance fee fraud originates. Rather than hunting down scammers in Internet cafés, we were interested to see which technological affordances or limitations the scammers were faced with in this part of the world. In our initial research we came across reports about an electronic waste dump called Agbogbloshie. In the middle of Ghana's capital Accra, in this toxic wasteland by a lagoon, is where our electronics from developed countries are illegally dumped. Jennifer Garbys examines in her book *Digital Rubbish*² in detail how electronic waste ends up at e-waste dumps such as Agbogbloshie: first they linger in

- xCoAx conference Bergamo/Italy

Dear Valued Customer,

We are so glad that you have chosen to purchase a Seagate hard drive. This drive is a high-quality, reliable, and durable storage solution for your data. It is designed to provide you with fast, efficient, and secure storage for your files and documents. We are confident that you will be satisfied with your purchase.

Because of the complexity of the drive, we have included a detailed instruction manual to help you get the most out of your drive. Please read the manual carefully to ensure that you are using the drive correctly and safely. We also recommend that you back up your data regularly to protect it from loss.

If you have any questions or need assistance, please contact our customer support team. We are here to help you with any issues you may have. We appreciate your business and look forward to serving you again.

Thank you for choosing Seagate. We are committed to providing you with the best possible customer service and support. We hope you enjoy your new drive and the performance it provides. We are confident that you will be satisfied with your purchase.

Best regards,
Seagate Customer Support Team

MAPPING THE SMART WORLD

"Mapping the Smart World" untersucht die Lebenszyklen von Gebrauchsgütern und Netzwerktechnologien. Durch die Zuordnung der wichtigsten Standorte für Bergbau, Raffination, Produktion, Lagerung und dem internationalen Recycling von E-Schrott stellen wir die komplexen Handelsketten der Entwicklung und Produktion aufzeigen, die unser vernetztes Leben ermöglicht. Die interaktive Karte wurde während des "Mapping the Smart World" Artikels als Teil des Vorberichts-Programms des "Freem Theaters" inszeniert. Die Visualisierung basiert auf dem von Ars Electronica Solutions & der LinzPhone.

"Mapping the Smart World" examines the life cycles of consumer electronics and network technologies. By mapping the key locations for mining, refining, production, storage and the urban mining of e-waste we want to bring to light the complex chains of development and production that enables our networked lives. The Mapping the Smart World reveals locations of both production and consumption, and ecological disasters. The interactive map was created as part of the "Freem Theaters" program. The visualization is based on the data provided by Ars Electronica Solutions & the LinzPhone.

Dumping: Agbogbloshie

Agbogbloshie is one of the biggest and most toxic e-waste dumps in the world situated on a former wetland (Korle Lagoon) in Accra the capital of Ghana. It is a center of legal and illegal exportation of electronic waste. Here lands e-waste from USA, Europe and Australia to be salvaged by locals who put their health at risk for mining gold, copper, aluminum and other valuable components from our consumer electronics. Computer components such as hard-drives, processors and motherboards are extracted and sold

Take away from the workshop

- people already know each other, aware the thematic
- expectations were clear and communicated
- clear outcome → mapping presented at ars
- no possibility to test
- value of labor, metals, scrap
- no artwork -> research method to discover future topics for artistic production.

Outlook:

- plan other exhibitions with the research lab
- plan a 2 week artlab in Spring 2017
- open source web version of the mapping.

Thank you!
